Jeep Hack (2015)

Hackers Miller & Valasek remotely kill Chrysler vehicle on highway.

www.cnbc.com/video/2015/07/22/hackers-hijack-moving-jeep-shocking-video.html

Keyfob Replay Attacks (2022)

Although more known—keyfob attacks continue to thwart implemented security (2022)

<https://www.blackhat.com/us-22/briefings/schedule/#rollback---a-new-time-agnostic-replay-attack-against-the-automotive-remote-keyless-entry-systems-27185>

Gone in 60 Seconds (2022)

New thieving tool uses headlight plugs to reprogram car keys. Thefts are fast and easy (120s)

<https://kentindell.github.io/2023/04/03/can-injection/>

Sirius-XM API Leak (2022)

Sirius-XM leak allows hackers to remotely unlock and start vehicles

<https://www.securityweek.com/several-car-brands-exposed-hacking-flaw-sirius-xm-connected-vehicle-service/>

Toyota Location Leak (2023)

Vulnerability in Toyota Cloud Services allows hackers to eavesdrop on vehicle location.

<https://www.bleepingcomputer.com/news/security/toyota-car-location-data-of-2-million-customers-exposed-for-ten-years/>

Continued API Leaks (2023)

Sam Curry continues research into leaked APIs. Finds vulnerabilities in **16!!!** OEMs

<https://samcurry.net/web-hackers-vs-the-auto-industry/>

A Simple Attack

Example of what you can do with

- \$75 hardware
- Nearly no knowledge
- A modern vehicle

We simply send randomized messages at a high rate

Denial of Service Random Injection Attack Video

CAN basics

Shared serial communication bus
designed to be robust and inexpensive

Implemented as a two-wire differential signal
(CAN High and CAN Low)

CAN is a message-based protocol

Messages contain an ID field,
a data field, and a few others

Defending against Cyber Attacks

Problem: Cybersecurity Resilience Varies Wildly by Manufacturer

Best Practice	OEM A	OEM B	OEM C	OEM D
CAN Gateway	✓		✓	
CAN Message Authentication			✓	
Segmented Networks	✓	✓	✓	
Transparent Vulnerability Handing	✓			
Frequent Security Patching			✓	
Whole-Vehicle Security Assessments				

Intrusion Detection & Prevention

- Fabrication Attacks: Simple injected malicious messages
- Suspension Attacks: Preventing ECUs from speaking (e.g., targeted bus-off)
- Masquerade Attack: Very sophisticated. Suspends transmission of real messages, replaces expected data with malicious payload

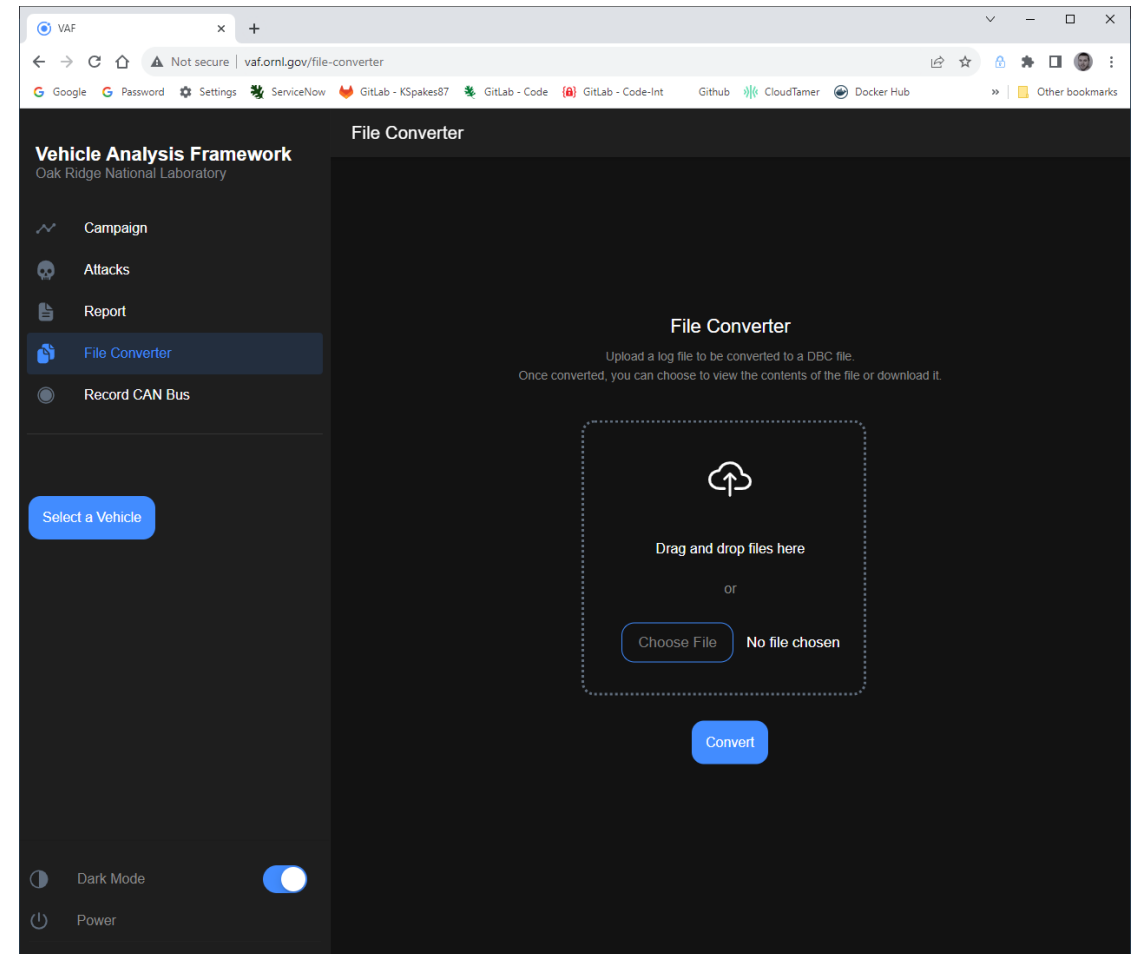

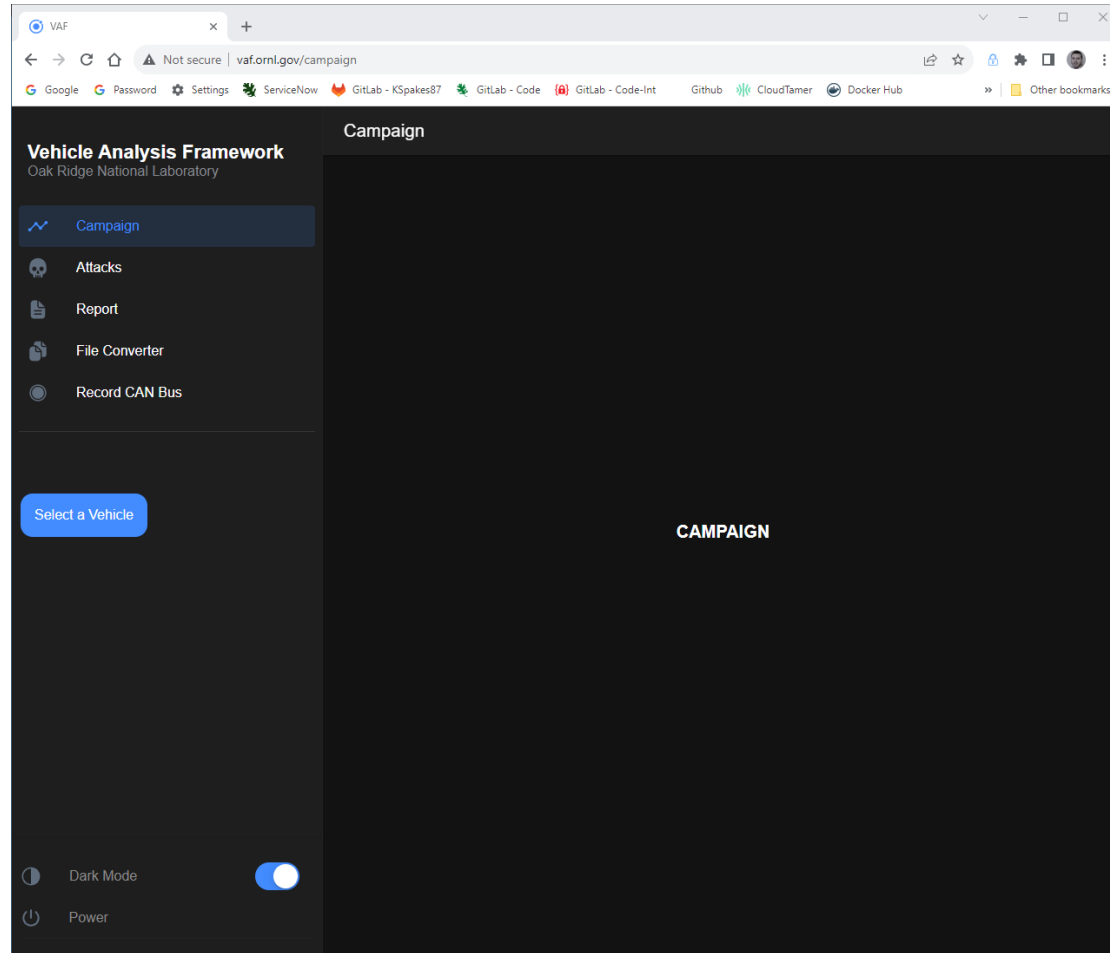

SHIELD: Secure Hijack, Intrusion, and Exploit Layered Detector

- Ensemble intrusion detection system for in-vehicle Controller Area Networks

ORNL Entire Vehicle Analysis of Cybersecurity (EVAC) Framework

Goal: Automate the analysis of a vehicle's cyber resilience
